Engage Version 0.6-alpha

New functionality

1. The solution version number is visible in the application in the settings section.
2. Outcome Categories and Standard Response Categories can be added in the settings
3. User Avatars are assigned a colour to more clearly distinguish between users.
4. Sound alongside Notifications within the Beta iPhone App

Bug Fixes

1. A "General" category is added by default to new instances (for both Outcomes and Standard Responses).
2. The Standard Response tag can be edited again.
3. The Outcome tag enforces the requirement that only lower case alphanumeric characters and dashes are allowed.
4. The toolbar in the conversation view was reworked to resolve the application sometimes freezing when accessing the photo function.
5. User presence is now correctly updated by the application showing when user is online and using the application.

Deployment Notes

1. The application is available on iPhone (TestFlight).
   a. When logged in, the app will subscribe to push notification for the relevant instance
   b. The default notification sound will be used
2. The application will check for updates on load.
3. The instance to connect to can be specified on login.

Technical Updates

1. Migration-script functionality added to address data changes between versions of the solution.
   a. The migration script for 0.6 addresses two problems:
      i. Conversations that were not correctly closed (remains in Assigned when closed)
      ii. Users that were not correctly created (did not show up in participants list).
